E-Commerce Customer Behaviour Analytics

160,000 Customer events · Brands, Categories, Promotions & Traffic · October – November 2019

DOCUMENTATION

- A** **Derived Variables**

Measures: Total Revenue, Conversion Rate (purchase sessions ÷ total sessions), Cart Abandonment Rate, Average Order Value, Promoted Conversion Rate, Average Discount, vs Normal Conversion Rate, Single Category Users, Average Views per User, Oct–Nov Growth, Revenue per Purchase, Brand Diversity

Calculated Columns: IsPromoted (product_id + date composite key), Price Groups (7 bands), Time of Day, Hour Label, State Name, Weekstart
- B** **Potential users of this report**

Marketing teams (for promos and campaigns), Business analysts (To identify Key insights, Potential strategies and revenue tracking), Leaderships (To monitor High - level KPIs)
- C** **Business Value Generated**

Promotions — Promoted events nearly double conversion rate from 9.24% to 18.62% and reduce cart abandonment by 42.11%, enabling marketing teams to justify and optimise promotion spend.

Traffic & Timing — Friday 3PM and Fri–Sun Morning/Afternoon identified as peak engagement windows, allowing precise ad campaign and content timing decisions.

Brand Performance — Apple generates \$762 per purchase vs Samsung's \$270 despite 21% fewer views, helping leadership prioritise brand investment and pricing strategy.

Category Strategy — Electronics drives 87% of total revenue at 10.87% CR vs 9.24% platform average, while Furniture (2.48%) and Apparel (3.74%) significantly underperform — guiding category prioritisation decisions.

Search & Discovery — 78.8% of users browse only one category averaging 1.09 views per session, directly quantifying the cross-category discovery gap and making the case for recommendation engine improvement.
- D** **Additional Data Requirement**

Age and gender details to identify high-value customer segments, returns and refunds data to calculate true net revenue per brand and category, actual search query logs to validate view-based browsing intent analysis, external competitor pricing benchmarks to contextualise platform pricing and price sensitivity findings, linked view-to-purchase session data to enable true end-to-end funnel analysis beyond the independently recorded events in this dataset

KEY TAKEAWAYS

- Top brand by revenue

 **Apple -- \$3.1M**

\$762 average per sale and 13.3% CR
- Top Category by revenue

 **Electronics -- \$4.9M**

87% of total revenue and 10.1% CR
- Peak Traffic window

 **Friday - 3 PM & +57.5% in Nov**

Singles day drove November traffic to 96.4K
- Impact of Promotion and Pricing

 **9.24% to 18.62 CR**

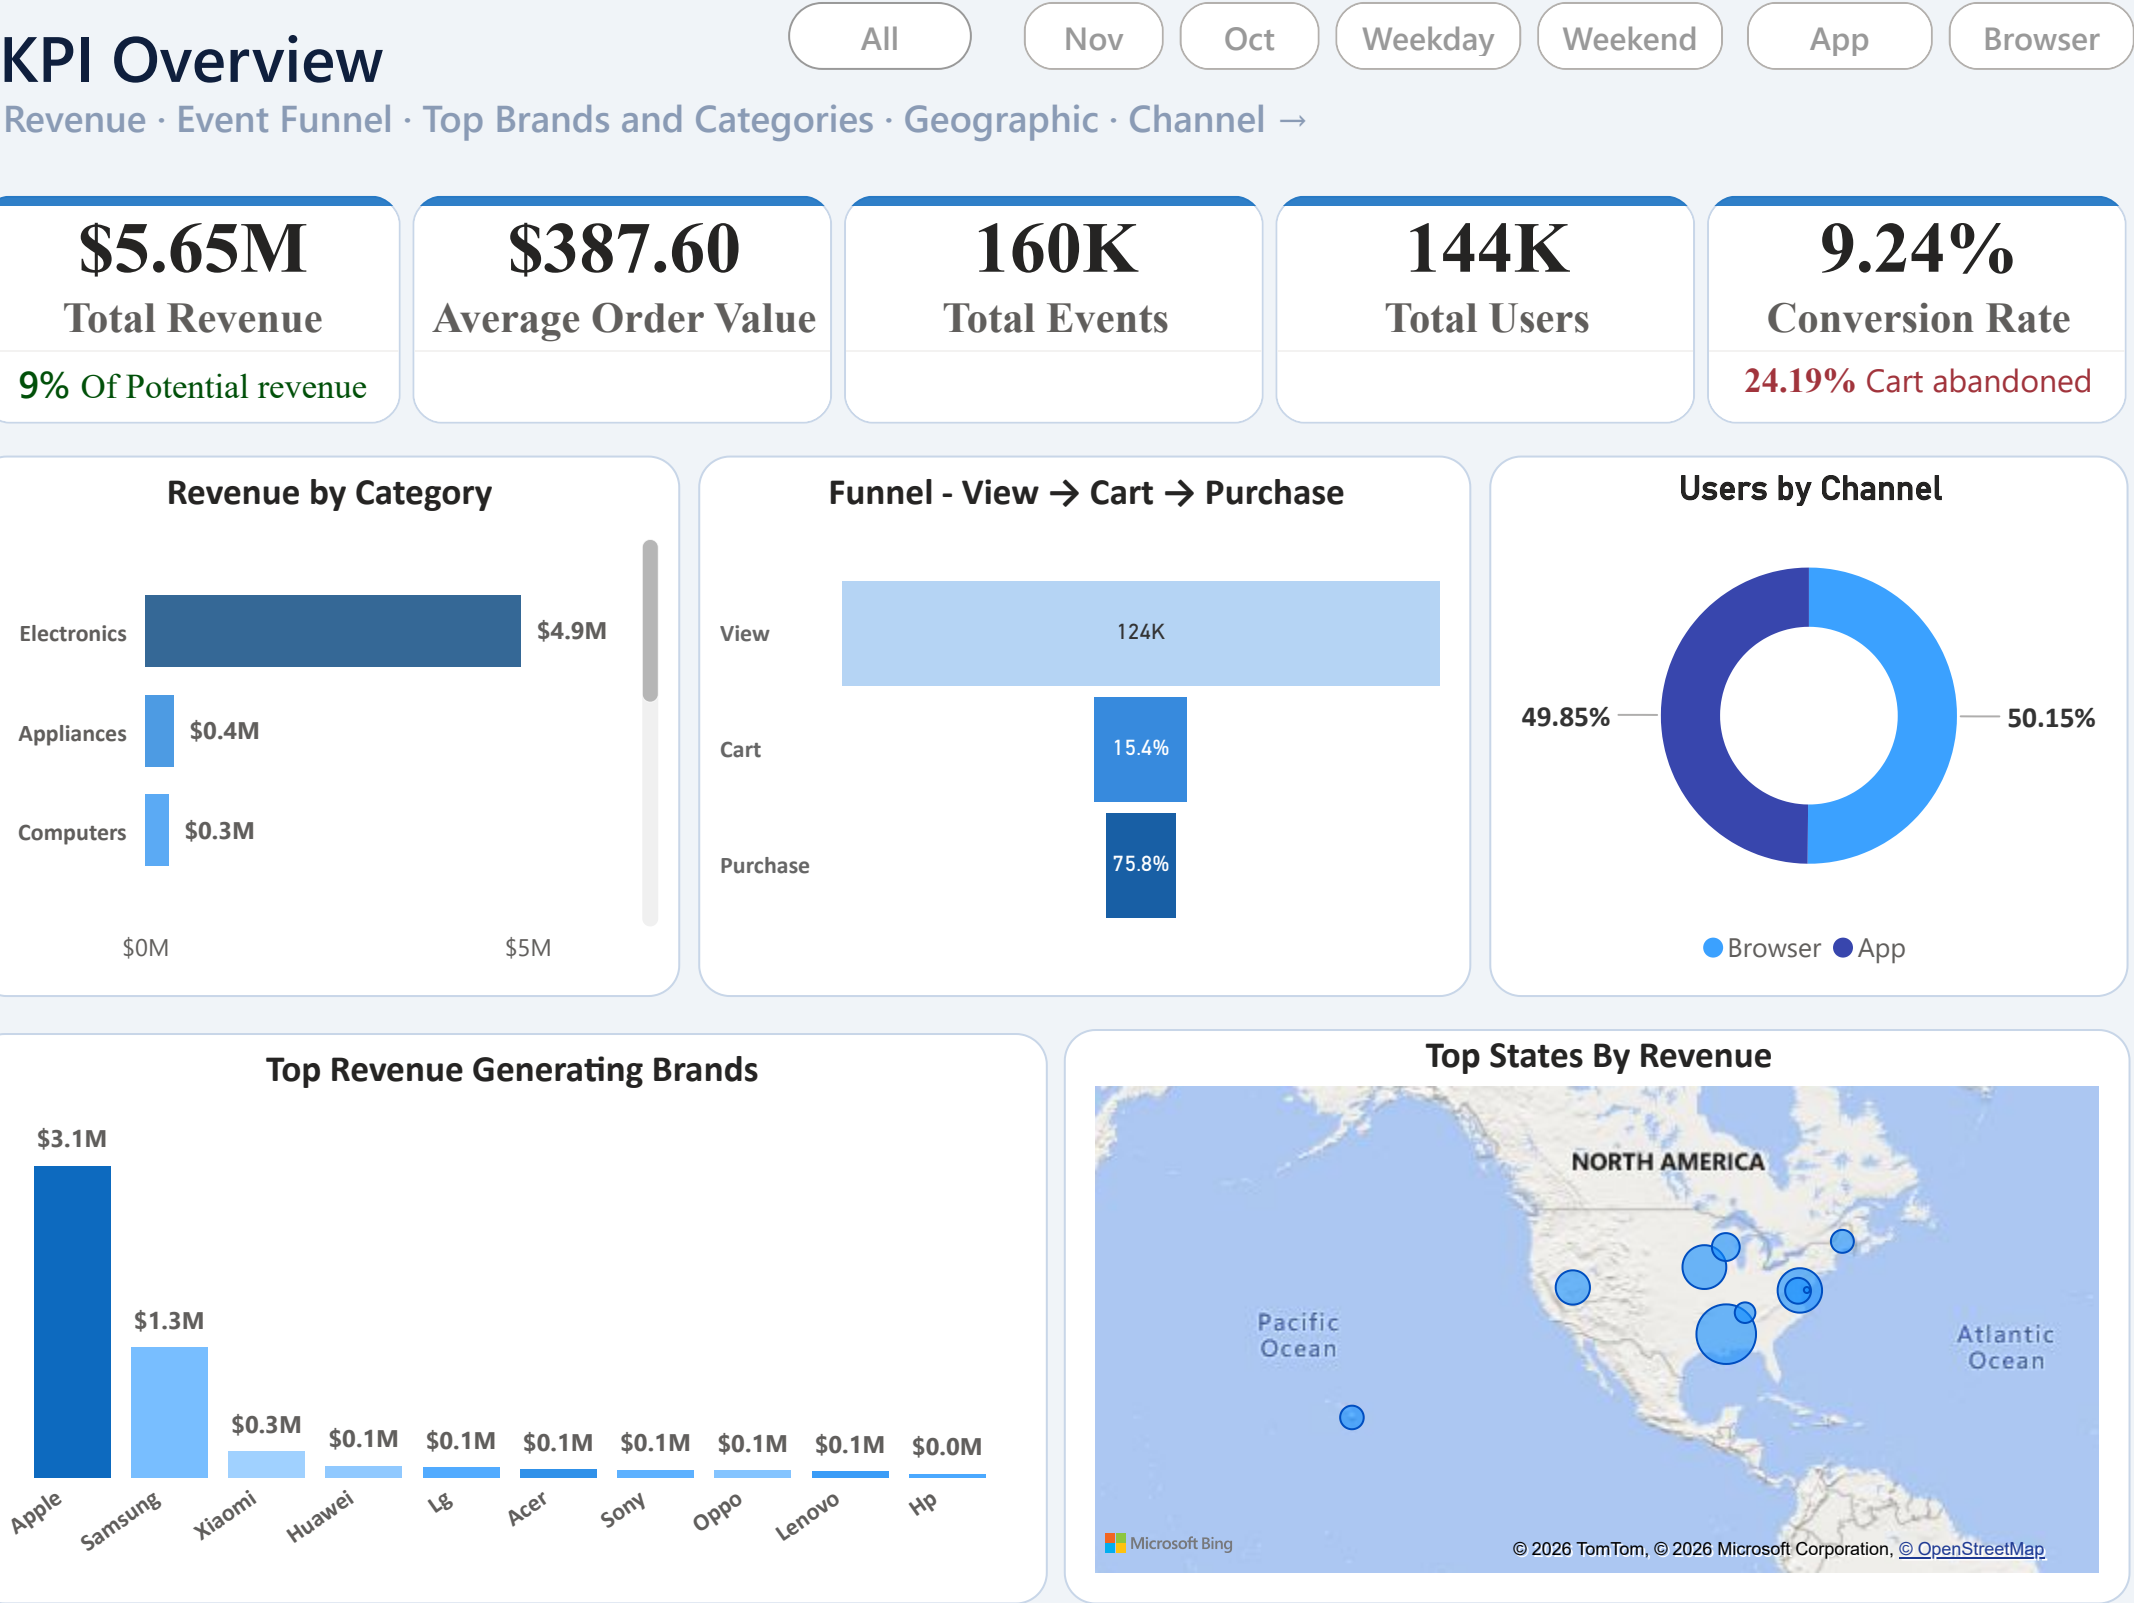

Price and sales had a nearly negative relation apart for singles day
- Most Browsed Brand

 **Samsung -- 28K views**

114K single category users - 78%
- Most Diverse Brand

 **Xiaomi**

Daily Traffic

Sessions by day of week and time of day

Time/Days	Mon	Tue	Wed	Thu	Fri	Sat	Sun
Afternoon	5799	6183	6125	6510	8173	7722	8238
Evening	1875	2017	2061	3202	3315	3218	2042
Morning	6949	7551	7545	7527	10498	11144	11331
Night	3288	3339	3250	3484	5649	5244	4417

The sharp traffic spike between Nov 3rd and Nov 17th coincides with Singles Day (11.11) , the world's largest online shopping event. Sessions escalated to 96.4K in November vs 61.2K in October, driven almost entirely by this week. Notably, average prices remained unchanged during the spike confirming the surge was event-driven, not price-driven.
